

## **DWR/Water Conservation Workgroups**

Outdoor residential water use standard preliminary measurements should be coming to the District by December. This is based on the Model Water Efficient Landscape Ordinance. The upcoming legislation will have the District with a budget for overall Indoor and Outdoor Water Use (Ag, residential, commercial). It is important that we make sure the budget for the District's outdoor residential use is accurate and I have been part of all the technical workshops and can assist when reviewing the data and how to update any inaccuracies, especially since the model is not made specifically for this area and climatology.

The next Conservation workgroup will be on Outdoor Residential Landscape - Nov. 13th.

## **EI Dorado LAFCO**

I continue to represent the Special Districts as a commissioner on LAFCO. I brought up the issue of using the Municipality Service Reviews to check to ascertain the services being provided and the revenues when looking at the property tax from districts especially those that provide water and the need to maintain infrastructure. The MSR is a comprehensive study of the District, rate structure and financials, its sphere of influence and the service it provides, and its assets/infrastructure.
